

# SHOCK ABSORBER EDS

## Product description

Shock absorber with electronic adjustment of the damping system (electronic damping system= EDS). For any model of motorcycle where the shocks are attached directly onto the swing arm. Easy to operate control switch on handlebar: electronic adjustment for damping levels - normal, comfort or sport - and for load conditions - 1 person, 2 persons or 1 person with luggage.

## Technical Data

Assembly length	100% custom-built to order
Stroke depth	100% custom-built to order
Diameter	14-18mm piston rods, 40-50mm tube
Suitable for	Street, Offroad

# SHOCK ABSORBER EDS

## Overview of success factors

### Significant advantages

A press of the button adjusts the shock to the required damping level in just a second while riding and the load adjustment takes max. 10 seconds while stationary. The perfect, tailor-made solution for any road surface, rider or style of riding.

### Top performance

You have three bikes in one if you have EDS suspension. The wide range of adjustment, up to 20% of the damping resistance, completely alters the balance of the bike from a comfort level for long tours to a normal level for daily use or a sporty level for use on the race track. An important factor is the riding safety in all riding modes and the safe installation of the EDS - which can basically be done by any motorcyclist with adequate experience.

### Better - from WP

The electronic damping system EDS was developed and patented by WP. All other systems that have appeared since are mere replicas. None of these can compete with the extensive know-how that WP has gathered over the past 10 years as the original manufacturer of the system. The quality and simplicity of the original WP electronic damping system are unbeatable.
